Office 365 Mac Calendar App Password

I currently use Fantastical on my Mac to connect to my O365 calendar but I'm thinking I may just want to switch over to the macOS Calendar.. I also use the native iOS Calendar app on my iPhone and iPad with my O365 calendar.. This should NOT happen if MFA is enabled and an App Password has been created to be used for the Mail app.. Oct 13, 2017 I didn't try to use the Calendar app prior to upgrading to High Sierra.. The Mail app then prompts the user to enter their Office 365 password which confuses the end user because they try to re-enter the generated App Password which it then fails to sign in because it actual requires the user's standard.
